Attorney Docket No.: P4468US02 Patent

Amendment and Presentation of Claims

Please replace all prior claims in the present application with the following claims.

1. (Previously Presented) A method of creating an atrioventricular bypass tract for a heart,

comprising:

growing mesenchymal stem cells in vitro into a strip with two ends;

attaching one end of the strip onto the atrium of the heart, and

attaching the other end of the strip to the ventricle of the heart, to create a tract connecting

the atrium to the ventricle to provide a path for electrical signals generated by the

sinus node to propagate across the tract and excite the ventricle.

2. (Original) The method of claim 1, wherein the steps of attaching are performed by

suturing.

3. (Original) The method of claim 1, wherein the stem cells are adult human

mesenchymal stem cells.

4. (Original) The method of claim 3, wherein the step of growing comprises growing the

stem cells in culture on a nonbioreactive material.

5. (Original) The method of claim 4, wherein the step of growing is performed in an

environment substantially free of any additional molecular determinants of conduction.

6. (Currently Amended) The method of claim 1, further comprising a step of adding a

nucleic acid encoding a protein or peptide or biologically active fragment thereof to the

mesenchymal stem cells by electroporation.

7. (Previously Presented) The method of claim 6, wherein the nucleic acid encodes a

connexin.

2

Attorney Docket No.: P4468US02

Patent

- 8. (Original) The method of claim 7, wherein the connexin includes connexin 40.
- 9. (Original) The method of claim 7, wherein the connexin includes connexin 43.
- 10. (Original) The method of claim 7, wherein the connexin includes connexin 45.
- 11. (Currently Amended) The method of claim 6, wherein the step of adding a <u>nucleic</u> acid gene by electroporation includes adding genes <u>nucleic acids</u> that encode alpha and accessory subunits of an L-type calcium channel.
- 12. (Currently Amended) The method of claim 7, further comprising adding [a] nucleic acids acid that encodes encode alpha and accessory subunits of an L-type calcium channel.

Claims 13-34 Cancelled

- 35. (Previously Presented) The method of claim 6, wherein the nucleic acid encodes a hyperpolarization-activated cyclic nucleotide gated (HCN) channel.
 - 36. (Previously Presented) The method of Claim 35, wherein the HCN channel is HCN2.
